

AADIL SHAIKH

UI/UX Designer | Frontend-Focused Product Designer

adimohd76@gmail.com · [GitHub](#) · [LinkedIn](#) · [UI/UX Portfolio \(Figma\)](#) · +91 9137513093 · Kopar Khairne, Navi Mumbai

ABOUT ME

UI/UX Designer and frontend-focused developer with hands-on experience designing user interfaces, mapping user flows, and building responsive, accessible front-end experiences. Skilled in Figma-based product design (wireframing, prototyping, design systems) and in translating those designs into functional interfaces using React and Angular. Experienced in shaping AI-powered product experiences — from personal finance apps to project-management and e-learning platforms — with a strong focus on usability, visual hierarchy, and consistent interaction patterns. Passionate about solving real user problems through clear, purposeful design and contributing to product-focused teams.

EDUCATION

Saraswati College of Engineering (2023–2027) : Computer Engineering **7.8 CGPA**

Yaswantrao Chavan College of Science (2021–2023) : Higher Secondary Education in Computer Science

SKILLS

- **UI/UX Design** — Figma, Wireframing, Prototyping, User Flows, Design Systems, Usability & User Research, Interaction Design
- **Tools** — Figma, Canva, Stich, Jira
- **Frontend Development** — React, Angular, Responsive Web Design, TypeScript, JavaScript, Tailwind CSS
- **Backend Development** — Node.js, Express.js, MongoDB
- **Cloud & Deployment** — Vercel, Render, Git, GitHub
- **Programming Languages** — Java, Python, JavaScript
- **AI & Agents** — Generative AI, Prompt Engineering, MCP

WORK EXPERIENCE

Mathcoms | [Mathcoms Live](#) — *UI/UX & Frontend Developer Intern*

April 26 – Present

- Contributing to UI/UX design for a project management solution with an integrated LLM-based chatbot — shaping user flows, screen layouts, and interaction patterns for task management and workflow automation.
- Building the frontend using Angular, translating design decisions into a responsive, intuitive, and accessible interface.
- Designing the chatbot's conversational UI/UX to support natural task queries and workflow guidance for end users.
- Improving usability across the product by refining navigation, information hierarchy, and visual consistency.
- Collaborating with backend engineers (Node.js, Express, PostgreSQL) to ensure UI decisions align with API structure and real data, and that the end-to-end experience feels seamless.

Upto Skills | [Upto Skills](#) — *UI/UX Team Lead*

July 25 – Oct 25

- Led the design team for the UptoSkills AI Learning Platform, an AI-powered course platform connecting discovery, learning, community, and progress tracking.
- Designed the end-to-end learning journey in Figma — course discovery, video-based lesson workspace, in-context AI doubt-solving assistant, community discussion, and learning-history dashboards.
- Conducted user research and usability testing to refine workflows, improving navigation, accessibility, and learner engagement.
- Designed key features including personalized course cards, structured lesson modules with progress indicators, contextual AI assistance, and real-time notifications.

UI/UX DESIGN PROJECTS

FinFlow — **AI-Powered Personal Finance App (UI/UX Case Study)** - [Portfolio](#)

- Designed a full personal-finance mobile app experience covering onboarding, home dashboard, expense tracking, budgets, savings goals, analytics, and an AI financial coach.
- Structured a four-step personalization onboarding flow (money goal, saving preference, spending level, focus areas) using progressive disclosure to reduce cognitive load before account creation.
- Built a status-driven visual system for budgets (On Track / Warning / Over Budget) using color and progress bars so users can interpret their financial position at a glance.
- Designed a conversational AI Coach interface with suggested prompts, exposing useful capabilities (savings tips, spending analysis, investing guidance) without forcing users into a rigid flow.

- Designed the analytics screen hierarchy — balance and savings rate, income/expense context, spending trend chart, and category-level insights — to help users see patterns, not just numbers.

MPMIQ — Project Management SaaS (UI/UX Case Study) - [Portfolio](#)

- Designed a desktop project-management workspace unifying teams, tasks, sprints, analytics, calendars, and AI assistance into one connected workflow.
- Designed multiple complementary views — backlog & sprint boards, calendar scheduling, and a reporting dashboard (cycle time, cumulative flow, velocity, burnup/burndown) — sharing a consistent visual language.
- Integrated a contextual AI assistant alongside the project workspace rather than as a separate destination, with prompted discovery to help users find what it can do.
- Applied consistent design patterns for navigation, filters, status labels, and contextual menus to reduce cognitive load across dense operational screens.

UpToSkills — AI-Powered Learning Platform (UI/UX Case Study) - [Portfolio](#)

- Designed a complete AI-powered learning platform connecting course discovery, structured video lessons, an in-context AI doubt-solving assistant, community discussion, and progress tracking into one continuous journey.
- Designed the course discovery experience (popular courses, ratings, pricing, curriculum preview) so learners could move from browsing to a confident buying decision.
- Designed the lesson workspace — module navigation, video player, progress bar, and key-concept summaries — to keep learners oriented without losing context.
- Designed an AI assistant embedded beside the lesson ("Ask Your Doubt") so learners get explanations and examples without leaving the content, following a Watch → Ask → Understand → Continue pattern.
- Designed a community Q&A experience blending peer answers, AI suggestions, and personal course context, plus a learning-history dashboard (hours, completions, streaks) to make progress visible and motivating.

GoCab — EV Cab Booking App (UI/UX Case Study)

- Designed a ride-booking app built entirely around electric vehicles, positioning every trip as a zero-carbon-emission ride instead of a regular cab booking.
- Designed the booking flow — pickup/drop selection, EV cab matching, fare estimate, and live tracking — keeping the experience as simple and familiar as a standard cab app.
- Designed a carbon-savings indicator shown after each ride, converting distance travelled into estimated CO2 emissions saved versus a petrol/diesel cab, to reinforce the app's environmental impact.
- Designed a cumulative impact dashboard (total rides, distance, and carbon emissions saved over time) to motivate repeat usage through visible, ongoing environmental impact.
- Used a clean, eco-themed visual language (green accents, simple iconography) to reinforce the sustainability positioning across booking, tracking, and impact screens.

OTHER PROJECTS

AI Mentor Platform - [Live](#)

- Built an AI-powered career mentorship platform helping students and professionals transition into new career domains through personalized roadmaps, adaptive learning schedules, AI-curated resources, and domain-specific communities.
- Developed real-time mentoring features including chat, gamification, progress tracking, and AI-based job/internship recommendations to improve engagement.

Tech Stack: React, Next.js, Node.js, Express.js, MySQL, MongoDB, Redis, Gemini API, Socket.io, React Flow

Swagger Space — API Documentation & Collaboration Platform - [Live](#)

- Built an API workspace enabling teams to design, document, test, and share REST APIs from a centralized platform with version control and workspace management.
- Implemented interactive API testing, environment management, authentication support, request history, and team collaboration.

Tech Stack: React, TypeScript, Node.js, Express.js, MongoDB, Redis, JWT Authentication, Swagger/OpenAPI, Socket.io

Financial Data Platform — Stock Market Dashboard - [Live](#)

- Built a full-stack financial dashboard with real-time and historical stock data, interactive charts, and a modern fintech-inspired UI.
- Implemented analytics including moving averages, daily returns, volatility scoring, and basic AI-based trend prediction using Pandas.

Tech Stack: React, Vite, FastAPI, Python, Pandas, Recharts, yfinance

HACKATHON / IDEATHON

- INNOSPARK'2025 — Winner [Post](#)
- Avishkar'2025 — Runner-up [Post](#)
- MUMBAI HACKS'2025 — Finalist [Post](#)

- SANKAPL IDEATHON'2025 — Finalist [Post](#)
